

Installation Instructions for PRP-7800 & PRP-7801 Billet In-Line Oil Filter

Installation Instructions:

The filter can be assembled from either end, but it's easier to assemble by installing the end cap labeled "IN" first and then inserting the spring inside the body of the filter. Make sure the spring is centered in the pocket at the base. Install the filter with the hole at the end facing upward, and then screw on the cap labeled "OUT". Check to make sure the filter is centered and that the spring is centered in the assembly.

Replacement parts: Filter & Spring: PRP-7810
O-Ring Kit: PRP-7811
